

ANIMAL FUN FACTS: THE CHEETAH!

Cheetahs can run up to 70 miles per hour—that's faster than a car on most city streets!

They can go from 0 to 60 mph in just 3 seconds, but only for short bursts.

Those black lines under their eyes help block the sun's glare—like natural sunglasses!

Every cheetah's spots are unique, just like human fingerprints!

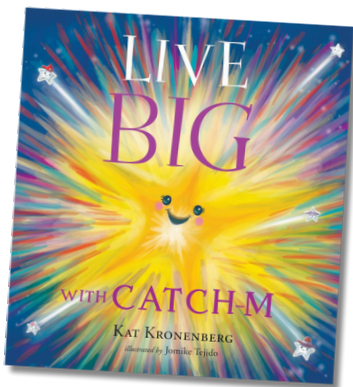

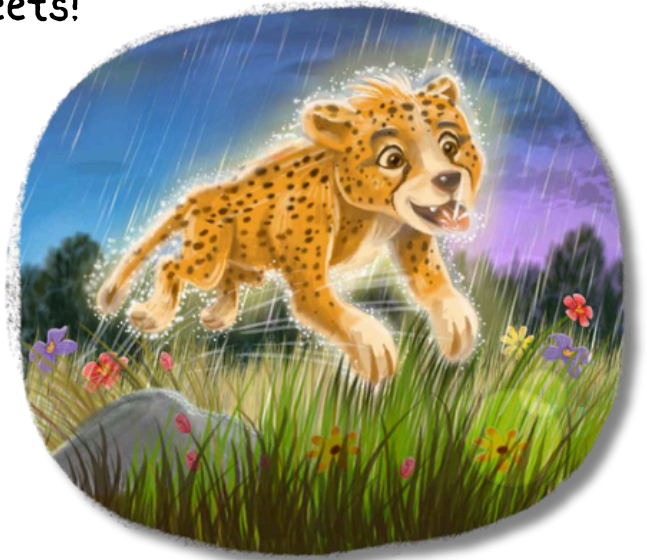

Unlike other big cats, cheetahs can't roar—they chirp, purr, and hiss instead.

Even baby cheetahs practice running and pouncing from a young age.

A cheetah can leap over 20 feet in one bound—about as long as a school bus aisle!

Their tails act like a rudder, helping them steer when running at high speeds.

Sadly, cheetahs are the most endangered big cat in Africa, and people are working hard to protect them.
